Profile

Software Engineer with strong ownership mindset; proficient in front end technologies with excellent communication and collaboration skills and a passion for learning and adapting to new technologies.

Employment History

Software Engineer, Point Blank Dev

May 2021 — Present 📍 Chicago, Illinois

- Build new features for the gather web application using Nextjs.
- Improved the performance of the gather-games micro-service which increased the ease of adding new games for the tournaments by 25%.
- Integrated the Sentry API to the gather-games micro-service to monitor performance of games and track errors, reducing bugs in production by over 85%.
- Using Zenhub, I raised tickets into relevant micro-services/projects and organized the sprint workflow of the group, raising the total efficiency of the team to over 68%.
- Led the migration of the gather-games micro-service data from the AWS Lambda service to the AWS DynamoDB service and this resulted in about 35% reduction in latency.
- Updated and maintained the StorybookUI while using it to facilitate the production of the gather web application and this increased the build efficiency by over 20%.

Education

University of Lagos, B.Sc. Physics

Oct 2014 — Nov 2018 📍 Lagos

I am a graduate of the University of Lagos where I studied and obtained a Bachelor of Science degree in physics.
