PROFILE

Results-driven Frontend Developer with 5+ years of professional experience building scalable, performant web applications with modern JavaScript frameworks. Specialised in React and Next.js, with strong TypeScript proficiency and a keen eye for UI/UX design implementation. Experienced across the full product lifecycle — from translating Figma designs into pixel-perfect interfaces to optimising component architecture, accessibility, and performance. Strong ownership mindset, clear communicator, and quick adapter to new technologies.

EXPERIENCE

Frontend Engineer

Point Blank Dev | May 2021 – Nov 2025 | Chicago, Illinois (Remote)

- Built and shipped new React and Next.js features for the Gather web application, contributing to a product used across multiple tournaments.
- Maintained and extended the Storybook UI component library, standardising reusable component patterns and increasing build efficiency by over 20%.
- Improved the performance of the gather-games micro-service frontend, increasing the ease of adding new games for tournaments by 25%.
- Integrated the Sentry API for real-time frontend error tracking and performance monitoring, reducing production bugs by over 85%.
- Used Zenhub to manage tickets and organise sprint workflows, raising overall team efficiency by over 68%.
- Collaborated on the migration of data infrastructure from AWS Lambda to AWS DynamoDB, achieving a 35% reduction in latency for data-heavy UI flows.

QA Engineer

Charisma.rocks | Approx. 1 Year | Contract

- Ran manual testing across the Charisma.rocks platform, identifying UI/UX friction points and edge cases in production flows.
- Provided structured feedback to the engineering team that directly informed UX improvements and reduced user-facing bugs.
- Developed a strong understanding of how scale exposes UX debt — informing a more performance-conscious approach to frontend development.

PROJECTS

TalentCourt — Sports Talent Discovery Platform

Personal Project | 2024 – Present

- Building a full-stack platform for emerging athletes — solo project conceived as YouTube meets LinkedIn for sports talent.
- Frontend stack: Next.js 16 (App Router), TypeScript, Tailwind CSS; implementing multi-role dashboards for players, scouts, and admins translated from Figma designs.
- Designed and built a dark-themed UI system with orange-to-red gradient branding, glassmorphism card patterns, and responsive layouts across all breakpoints.
- Implemented advanced React patterns including useTransition for non-blocking server actions, custom hooks for auth context, and reusable component systems.

Decentralised Exchange (DEX) — Stacks Blockchain

Personal Project

- Designed and built a decentralised exchange using the Clarity smart contract language on the Stacks blockchain.
- Implemented core swap and liquidity pool logic, gaining hands-on experience with blockchain architecture and DeFi protocols.

TECHNICAL WRITING

Hashnode Blog — nnamdisblog.hashnode.dev

- Publishing a build-in-public series documenting the end-to-end development of TalentCourt — 9 posts covering frontend architecture, component design, TypeScript patterns, and Next.js App Router.
- Additional articles cover React performance, light/dark mode with CSS variables, localStorage patterns in TypeScript, and video streaming with the Mux API.

EDUCATION

B.Sc. Physics

University of Lagos | Oct 2014 – Nov 2018 | Lagos, Nigeria

SKILLS

Frontend React, Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass, Tailwind CSS, React Native

UI & Design Figma to code, component systems, responsive design, glassmorphism, dark mode implementation

State & Data React hooks, useTransition, server actions, Prisma ORM, PostgreSQL (Supabase)

Tooling Git, Storybook, Zenhub, Sentry, Vercel

Backend Node.js, GraphQL, REST APIs, AWS DynamoDB, AWS Lambda

Blockchain Clarity (Stacks), DeFi / Smart Contracts

Languages English (native, bilingual), Igbo (native)
